That was from EFED and was ROCs – so residues of concern. Not sure if ROCKS means anything to upper management.

Hi Tom, yes add that bullet to that slide as well but change the wording up a bit and note that it was concluded by the ROCKS committee because some comments left there asks if a ROCKS review was conducted.

Pete

Ex. 5 Deliberative Process (DP)

I can copy that bullet to the “management considerations” slide.

Please review and edit the information in the broflanilide use and risk picture slides; I followed the PQZ slides as best I could.

Hi Anwar,

I moved those slides over from the last briefing as a starting point for HED and EFED to work from – but you are not tied to them.

Those PQZ slides were developed for the pending first residential use whereas this briefing will focus more on the pending PQZ import tolerance. Since the focus has shifted, you may want to consider how your slides may be updated to better focus on the new charge. Assuming that HED believes that the data sets for PQZ are protective of any PFAS concerns, I think the goal is for you to design the slides in a way that conveys this.

Thank you!
Debra

Hello Debra. I just took a look through the slides. For PQZ in the human health context, it's essentially what we had before. Are we looking to cut these down or add on to them?

Subject: Link to the PFAS and PQZ, Broflanilide and Inert ingredients

Hi Everyone,

I sent out the link for the skeleton slides in preparation for the upcoming IO briefing on the PFAS and the pesticides PQZ and Broflanilide and the inerts that also meet the PFAS definition. I meant to include a more complete with a message; however, I accidentally hit send before I was ready.

Anyway, I have copied the link in this email as well. Please let me know if there are others who need access to the slides that were not included and I can give them access to the files.

We look forward to working with all of you on these issues. Let me know if you have any questions.

Thank you.

Debra
